Aldox requires an acidic environment to release the drug from the linker. This is a key feature since it does not release the drug in healthy,non-acidic tissues. This allows 3.5 times the standard dose of doxorubicin to be given to the patient at each cycle. Further, CytRx has reported that they can treat for longer than six cycles which is the

current maximum for doxorubicin due to toxicity.

Page 2: Deleted	David Haen	1/29/2014 4:57:00 AM
As a result, the fact that CytRx has al	ready performed strongly in FDA trials should	never have been much of a
surprise in the first place
